How to Obtain Further Supplies of Valganciclovir and Immunosuppressant Medication

i.e. Tacrolimus (Advagraf, Envarsus, Adoport, Prograf), Ciclosporin (Neoral), Sirolimus (Rapamune), Azathioprine, Mycophenolate mofetil, Myfortic, Ceptava and Prednisolone.

NHS England has directed that the prescribing of immunosuppressant's for transplant patients should be done by the hospital's transplant clinic rather than the GP surgeries. We use a combination of collecting your medication from our onsite outpatient pharmacy and home delivery. You should order your medication when you come to clinic from Lauren Hall who is the clinic based pharmacist. Lauren can also answer any questions you have about your medications. If you receive home deliveries it important to order your medication in a timely manner. **Deliveries often take at least 5 working days.**

Prescriptions are not automatically generated and need to be ordered in clinic or via the contact details below. Please do not contact the home delivery company to request medications.

Should any issues arise with obtaining further supplies of immunosuppressant medication,
