Your Doctor has decided that you should have an Echocardiogram

What is it?

♥ An echocardiogram or 'echo' is a scan that uses ultrasound (sound waves) to produce pictures of the heart. The test is painless and without side effects. It does not use radioactivity.

Why is it being done?

♥ An echocardiogram gives your Doctor information about how well the heart pumps and whether your heart valves are working properly. It is not able to tell your Doctor whether you have angina.

What does it involve?

♥ You will be taken into a darkened room, the person performing the test is called a cardiac physiologist or Sonographer and may be male or female. The Sonographer will usually **NOT** be a doctor. This means that some questions you may have about the result may have to wait until you see your doctor in clinic.

♥ You will be asked to undress to the waist and to lie on a couch on your left hand side. If you require a chaperone, you may bring a friend or relative. Alternatively, we will provide a chaperone at your request.

♥ Stickers will be attached to your chest and connected to the machine. These will be used to monitor your heart rate during the test.

An ultrasound probe covered by a small amount of gel is placed gently on the centre of your chest and will be moved to different positions – beneath the left breast, beneath the rib cage and to the base of your neck. This provides images of your heart from a number of different angles which are then recorded.

The images will be reviewed by the cardiac physiologist or doctor and a report will be forwarded to the doctor who requested the echo. The images with the report will then be stored on a database which is only accessed by selected NHS personnel responsible for your care.

Please note: If you do not wish to have your information stored on the database the only way we can comply with this request is not to perform the echo.

♥ During the echocardiogram you will hear sounds coming from the machine, which represent blood flow through the heart.

♥ The echocardiogram will take approximately 20 minutes to complete.

Are there any special precautions that I need to take before the echocardiogram?

♥ No. You can take all your medication as normal. You can eat and drink as normal.

At the end of your echocardiogram

♥ Once the echocardiogram is complete you can get dressed and leave. There are no limitations to what you can do after the scan, for example, you may drive.
