Management of patients with Female Genital Mutilation (FGM)

**Issue Date**
26.04.19

**Review Date**
26.04.22

**Version**
2

**Purpose**
The purpose of this Standard Operating Procedure is to provide all staff working within Plymouth Hospitals NHS Trust with guidelines to manage patients suspected of having or having Female Genital Mutilation (FGM)

**Who should read this document?**
All staff working within:
- Maternity Services
- Emergency Department
- Genitourinary Medicine
- Gynaecology
- Paediatrics
- Any other area where female at risk patients may present

**Key Messages**
FGM is illegal under the FGM Act 2003 and amendments brought through the Serious Crime Act 2015. It is a form of child abuse and violence against women.
FGM comprises all procedures involving partial or total removal of the external female genitalia. This includes genital piercings and tattoos for non-medical reasons.

The Information Standards Board Female Genital Mutilation Enhanced Dataset (2016) requires all NHS organisations to record information about FGM within the patient population in healthcare records and confirms the local data sharing practices which must be adopted.
Any concerns, whether identified through using this guidance or through discussion with the patient and family, should be recorded within the patient’s records by the healthcare professional who has obtained the information.

The 2003 Act (Now included in the Serious Crime Act 2015) requires regulated health in England and Wales to report known cases of FGM in under 18s which they identify in the course of their professional work to the police (the mandatory reporting duty). Healthcare professionals are not expected to investigate or make decisions upon whether a case of FGM was a crime or not. All cases should be dealt with under existing safeguarding frameworks, which for children under 18 who have undergone FGM would mean a referral to Children’s Social Care and the police.

Staff need to inform the safeguarding team when a lady who has suffered FGM delivers a baby so that FGM-IS processes can be followed.

Complying with the duty does not breach any confidentiality requirement or other restriction on disclosure which might otherwise apply.

**Core accountabilities**

**Owner**
Alison O’Neill named Nurse Safeguarding Children & Anne Smith Safeguarding Midwife

**Review**

**Ratification**
Safeguarding Steering Group Executive Lead Lenny Byrne Chief Nurse
The Trust is committed to creating a fully inclusive and accessible service. Making equality and diversity an integral part of the business will enable us to enhance the services we deliver and better meet the needs of patients and staff. We will treat people with dignity and respect, promote equality and diversity and eliminate all forms of discrimination, regardless of (but not limited to) age, disability, gender reassignment, race, religion or belief, sex, sexual orientation, marriage/civil partnership and pregnancy/maternity.

An electronic version of this document is available on Trust Documents. Larger text, Braille and Audio versions can be made available upon request.
Standard Operating Procedures are designed to promote consistency in delivery, to the required quality standards, across the Trust. They should be regarded as a key element of the training provision for staff to help them to deliver their roles and responsibilities.

Standard Operating Procedure (SOP)
Management of patients with Female Genital Mutilation (FGM)

1. Introduction

Female Genital Mutilation (FGM) is illegal in England and Wales under the FGM Act 2003. It is a form of child abuse and violence against women. Amendments were brought through the Serious Crime Act 2015.

The term FGM captures mutilation of a female’s labia majora, labia minora or clitoris and includes piercing and tattooing.

In April 2015, the Information Standards Board published Female Genital Mutilation Enhanced Dataset Information Standard8 and supporting documentation. This standard requires all NHS organisations to record information about FGM within the patient population in healthcare records and confirms the local data sharing practices which must be adopted. This data must be reported to the Health and Social Care Information Centre on a monthly basis. SCCI2016 supersedes the FGM Prevalence Dataset (ISB 1610) which had been in use since April 2014.

Any concerns, whether identified through using this guidance or through discussion with the patient and family, should be recorded within the patient’s records by the healthcare professional who has obtained the information.

Regulated health in England and Wales must report known cases of FGM in under 18s which they identify in the course of their professional work to the police (the mandatory reporting duty). Healthcare professionals are not expected to investigate or make decisions upon whether a case of FGM was a crime or not. All cases should be dealt with under existing safeguarding frameworks, which for children under 18 who have undergone FGM would mean a referral to Children’s Social Care and the police.

Complying with the duty does not breach any confidentiality requirement or other restriction on disclosure which might otherwise apply.

Included within scope of duty:

- Girls under 18 who disclose they have had FGM
- When you see signs/symptoms appearing to show she has had FGM

### 2 Definitions

Female Genital Mutilation (FGM) is a procedure where the female genital organs are injured or changed, but there is no medical reason for this. It can seriously harm the health of women and girls in the long term.

Female genital mutilation is classified into four major types. The World Health Organisation defines FGM as follows:

- **Type 1:** Clitoridectomy: partial or total removal of the clitoris (a small, sensitive and erectile part of the female genitals) and, in very rare cases, only the prepuce (the fold of skin surrounding the clitoris).
- **Type 2:** Excision: partial or total removal of the clitoris and the labia minora, with or without excision of the labia majora (the labia are “the lips” that surround the vagina).
- **Type 3:** Infibulation: narrowing of the vaginal opening through the creation of a covering seal. The seal is formed by cutting and repositioning the inner, or outer, labia, with or without removal of the clitoris.
- **Type 4:** Other: all other harmful procedures to the female genitalia for non-medical purposes, e.g. pricking, piercing, incising, scraping and cauterizing the genital area.

Free online training is available to all NHS staff to help improve your knowledge and awareness of FGM.

### 3 Regulatory Background

Female Genital Mutilation Act 2003 and amendments brought through the Serious Crime Act 2015. The Serious Crime Act 2015 strengthened the legislative framework around tackling FGM.
In 2016, the government launched statutory multi-agency guidance on FGM. The guidance aims to provide information on FGM, to provide strategic guidance on FGM and to provide advice and support to front-line professionals.

No single agency can adequately meet the multiple needs of someone affected by FGM. This guidance encourages agencies to cooperate and work together to protect and support those at risk of, or who have undergone, FGM.

Working Together to Safeguard Children 2015 addresses legislative requirements and expectations and should be read and followed by a range of professionals including those working in health services. Whilst the guidance does not make specific provision for safeguarding activities relating to FGM, it sets out requirements around information sharing which are needed to effectively safeguard against FGM and all forms of child abuse.

4 Key Duties

FGM standard requires all NHS organisations to record information about FGM within the patient population in healthcare records and confirms the local data sharing practices which must be adopted. This data must be reported to the Health and Social Care Information.

Practitioners must complete the Trust Female Genital Mutilation Proforma available on the Trust intranet. (see appendix 1)

Any concerns, whether identified through using this guidance or through discussion with the patient and family, should be recorded within the patient’s records by the healthcare professional who has obtained the information.

Health agencies in England and Wales are required to report cases of FGM in under 18s which they identify to the police. Healthcare professionals are not expected to investigate or make decisions upon whether a case of FGM was a crime or not.

All cases should be dealt with under existing safeguarding frameworks, which for children under 18 who have undergone FGM would mean a referral to Children’s Social Care and the police.

Complying with the duty does not breach any confidentiality requirement or other restriction on disclosure which might otherwise apply. This includes, girls under 18 who disclose they have had FGM and when signs/symptoms appear to show she has had FGM

Booking appointment (ideally by 10 weeks or at the next appropriate contact) must be asked if they have suffered FGM/cutting.

Following delivery for a lady who has previously suffered FGM the safeguarding midwifery team must be informed so that FGM-IS processes can be followed.

5 Procedure to Follow

Please see below for FGM practice algorithms/pathways for adults and children.

Consider have you:
• Discussed FGM with the patient and their family.
• Completed an FGM Proforma. (NHS Enhanced Data Set)
• Recorded your actions and the outcome of the assessment on the patient’s healthcare record.
• Followed your local safeguarding process and made a referral to children’s social care, if appropriate.
• Reported a known case of FGM to a child under 18 to the police under the FGM mandatory reporting duty, if appropriate.
• Shared relevant information with other health professionals including the GP, health visitor, school nurse, your local safeguarding lead.
• Consider giving the patient an FGM information leaflet available to download in several languages www.orderline.dh.gov.uk
• Following delivery for a lady who has previously suffered FGM the safeguarding midwifery team must be informed so that FGM-IS processes can be followed.

Specific guidance for clinicians managing FGM patient’s care is available from Female Genital Mutilation and its Management (Green-top Guideline No. 53) (RCOG)

**The Dataset and Data Submission**

The full dataset contains 30 data items including: patient demographic data, specific FGM information, referral and treatment information.

The FGM Enhanced Dataset Information Standard (SCCI2026) instructs all clinicians to record in the clinical notes. Whenever, (not just the first time) FGM is identified, either through clinical examination or self-reported information data should be submitted to the FGM Enhanced Dataset. For all pregnant women with FGM a data set should be completed at booking.

If a woman or girl has already been identified and reported to the FGM Enhanced Dataset as having FGM, a new Attendance record and/or FGM Record will need to be created if:

• the woman or girl is having treatment relating to her FGM (Attendance Data)
• the woman gives birth (Attendance Data)
• there is a change in her FGM Type (FGM data)
FGM Management and reporting in children

Are you concerned that a child may have had FGM or be at risk of FGM?

- The child / young person has told you that they have had FGM.
- You have observed a physical sign appearing to show your patient has had FGM.
- Her parent / guardian discloses that the girl has had FGM.
- You consider the girl to be at risk of FGM. To consider what action to take, refer to the DH FGM Mandatory reporting duty applies? Yes

IMMEDIATE RESPONSE REQUIRED for identified girl OR another child/other children Police contact 101 You will have to provide:
- girl's name, DoB and address
- your contact details
Contact your local safeguarding lead
Police and social care take immediate action
Record all decisions/actions
Be prepared for police officer to call you back
Best practice is to report before COP next working day
Update your local safeguarding lead/team

A social care referral may not be required at this point? Follow local safeguarding procedures. Inform the safeguarding Children team.

Follow Safeguarding procedures and refer to Social Care and Safeguarding team

ASSESSMENT OF CASE: Multi-agency safeguarding meeting convened in line with local safeguarding arrangements, including police, social care and health as a minimum.

Consider need for Paediatric forensic Examination and referral to SARC and Social Care

Health professional (with relevant paediatric competencies) lead on the assessment of the health needs of the child. The assessment (with consent) may consider the need for:
- Referral for genital examination using colposcope to the designated service in your area
- General health assessment (physical and mental health)
- Treatment and/or referral for any health needs identified (whether related to the FGM or not)
- Include assessment of presence/absence of additional

If a girl appears to have been recently cut or you believe she is at imminent risk, act immediately – this may include phoning 999.

REMEMBER: Mandatory reporting is only one part of safeguarding against FGM and other abuse.
Always ask your local safeguarding lead if in doubt.
6 Document Ratification Process

The design and process of review and revision of this procedural document will comply with The Development and Management of Formal Documents.

The review period for this document is set as default of three years from the date it was last ratified, or earlier if developments within or external to the Trust indicate the need for a significant revision to the procedures described.

This document will be reviewed by the Safeguarding Steering Group and ratified by the Chief Nurse.

Non-significant amendments to this document may be made, under delegated authority from the Chief Nurse, by the nominated author. These must be ratified by the Chief Nurse and should be reported, retrospectively, to the Safeguarding Steering Group.

Significant reviews and revisions to this document will include a consultation with named groups, or grades across the Trust. For non-significant amendments, informal consultation will be restricted to named groups, or grades that are directly affected by the proposed changes.

7 Dissemination and Implementation

Following approval and ratification, this procedural document will be published in the Trust’s formal documents library and all staff will be notified through the Trust’s normal notification process, currently the ‘Vital Signs’ electronic newsletter.

Document control arrangements will be in accordance with The Development and Management of Formal Documents.

The document author(s) will be responsible for agreeing the training requirements associated with the newly ratified document with the Director of Nursing and for working with the Trust’s training function, if required, to arrange for the required training to be delivered.

8 Monitoring and Assurance

- Compliance will be monitored by assessment of collated national data which will be continuously monitored by the Trust
- Safeguarding Team and Performance & Management Information Department
- Monthly review and annual reporting
- Issues will be reported to the Safeguarding Steering Group
- the Safeguarding Steering Group will devise an action plan and monitor progress if issues are identified
- Learning will be reported to the Safeguarding Steering Group and learning shared with professional groups as needed
